

## INSTRUCTIONS AFTER PULPOTOMIES

1. You may experience some pain for two or three days after your treatment. Tylenol is good for this pain.
2. Do not attempt to eat until the numbness is completely gone. You may accidentally hurt your lip if you eat too soon.
3. Please be sure to eat on the other side of your mouth today.
4. Eat hard foods on the other side of your mouth so that your tooth will have time to heal.

If you should experience an emergency with this treatment, please call the number listed below.
